

## Summary

Original Color Palette

Top 10 Careers of African Americans in the US out of Total Employed for Each Occupation

Updated Visualization: Depicts the percentage of African Americans in each occupation.

Often people think times have changed social issues have been solved. There is a higher African American makeup of community, social service and protective service occupations, both of which are similar career areas, suggesting that occupations today still remain uneven.

The original visualization places the layout as connected lines to boxes and focuses on business and capital value. The updated visualization illustrates the top 10 occupations out of all careers. The values were determined by finding the percentage of African Americans out of total employed.

To compare the different occupations in way that shows the percentage, a bubble chart was used. It allows the depiction of categorical data that has quantitative values that do not add to a whole in total, which a pie chart does. The separate circles indicate this latter characteristic.

The visualization was created using tableau.
